

The One Visit Cosmetic Tooth

With the advent of dental implants, we now have the capability to easily fill unsightly gaps in your smile. You have undoubtedly already heard advertisements for dental implants on radio and TV. They have become the accepted treatment for replacing missing teeth when you want the final result to be as solid and natural looking as your own teeth. However, conventional implants can be very costly and take many months for a case to be completed.

We are offering a very affordable alternative using mini dental implants. When appropriate, a mini dental implant can be painlessly placed in the gum where a tooth is missing and a natural looking temporary crown can be put over it to replace the missing tooth. The whole procedure can be done in about an hour. Later on, the temporary crown can be replaced with a permanent one (also painlessly!) to finish the process.

Your smile is a reflection of who you are; your best selling point. Boost your confidence and improve your image and you'll notice a change in how others treat you at work, in social settings... wherever!

Call Dr. Rundle today and set up a free consultation for your personal improvement and smile enhancement treatment. We'll be happy to explain how you can benefit from cosmetic tooth replacement.
